

Web Vulnerabilities Scanning Service

Web Application Vulnerability Scanning Service is the way you go about identifying the mistakes in application logic, configurations and software coding that hazard the availability, confidentiality and integrity of your data in database.

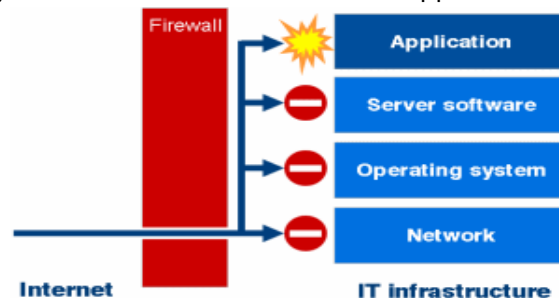

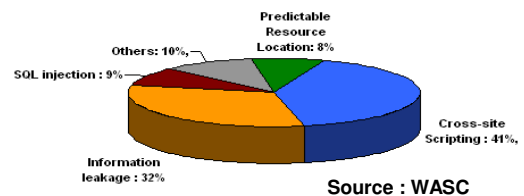

Why it is important for your business ?

According to the *Web Application Security Consortium (WASC) Web Application Security Statistics Project 2007*, the most prevalent vulnerabilities are **Cross-Site Scripting**, **Information Leakage**, **SQL Injection** and **Predictable Resource Location**. Vulnerabilities appears due to system design errors, Information Leakage and Predictable Resource Location are often connected with improper system administration.

However, there is misleading perception in application security. Traditional network security appliances cannot

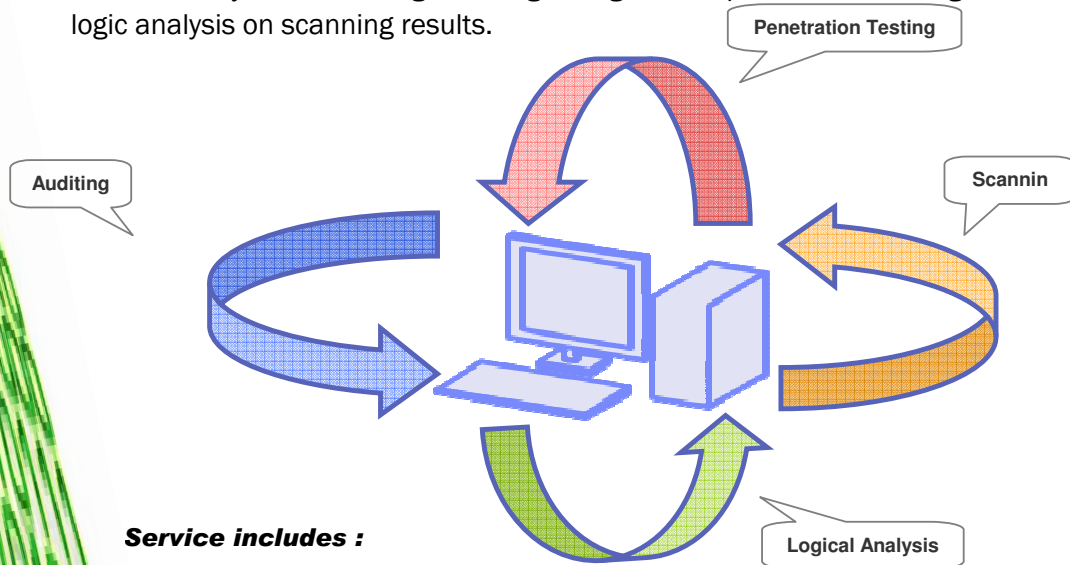

protect the system from web application attack. As a result, Web Vulnerabilities Scanning Service is important for protect your confidential data from web application attacks.

Maximizing the Security of your business

Huacomm have served in IP communication and IP networking industry for over 12 years. Being a foregoer in the industry, we aim to provide a simple and reliable networking and IP security service for maximizing the security of your business.

Huacomm Web-App Security Solution are designed to manage and identify the all possible vulnerabilities in your application system by providing professional network and system scanning, auditing configuration, penetration testing and logic analysis on scanning results.

Service includes :

- Integration with web vulnerabilities scanner - Exazor™
- Full scanning of one IP on your network system
- Pre-vulnerability scanning and Post-vulnerability scanning
- Detailed report and recommendations for both Pre / Post scanning

Service features :

- Help to identify all vulnerabilities and potential risks in your application system
- Minimizing the risk and harm in the system
- Provide a detailed report for improving the security effectively
- Secure your system in a cost and time effectively method
- Increasing the business efficiency by maximizing the performance of their application networks
